

BRINGING CHEMISTRY TO LIFE...!

The Elements

New Edition

Second Edition

John Emsley

The second edition of this widely acclaimed reference book collects together in a single volume the most important facts about all the chemical elements. Whilst retaining the alphabetical, easy-to-use format of the first edition, the opportunity has been taken to update information and to add a new section on environmental properties to go alongside the existing ones on the chemical, physical, nuclear, and electron-shell properties of the elements.

'The tables are packed with useful data for each of the elements, . . . I'd recommend that everyone who ever needs data on the elements obtains a copy.'

The Biological Chemistry of the Elements

The Inorganic Chemistry of Life

J. J. R. Fraústo da Silva and R. J. P. Williams

The study of the chemistry of living processes has traditionally centred on the behaviour of organic compounds in water - together they account for 99 per cent of the matter in living systems. However, we also know that about twenty 'inorganic' elements are also essential for life, and that they are found in similar amounts in most living systems. The authors' objective in this book is to examine and explain the importance of these elements by 'bringing inorganic chemistry to life'.

INSTRUCTIONS FOR CONTRIBUTORS

(1) GENERAL INFORMATION

Contributions (*three copies, all un-stapled*) and all correspondence about them should be sent to one of the Editors named on the inside front cover of the current number of the *Journal of Petrology*. Papers must be original material, written in English, that has not been published previously in any language. The normal maximum size of a paper is 30 printed pages (roughly 12,000 words including equivalent space for tables and figures) but the Editors encourage the submission of papers substantially shorter than this. Papers which will require more than 30 printed pages may rarely be accepted. However, unless there has been a specific agreement with the Editors, the extra length will be liable to page charges.

Authors will be sent one set of proofs for correction and return to the Editor. They may be required to pay for an excessive number of alterations in proof, apart from the correction of printers' errors. Authors will receive one hundred free reprints and additional copies may be ordered for purchase when proofs are returned to the Editor.

Authors should carefully study the current number of the *Journal of Petrology* to ensure that their papers correspond in format and style with the Editors' requirements. A summary of format is given below. Line figures should be in black ink with lines and symbols drawn large enough and boldly enough to stand reduction to the desired size. It is unnecessary to supply illustrations more than twice the linear dimensions desired in the final reproduction. Legends should be typed on a separate sheet.

(2) SUMMARY OF FORMAT INFORMATION

(2.1) Headings

There is a two or three tier structure. An example of the three tier structure is given below in small print:

(1) PETROGRAPHY

(1.1) Diorites

(1.1.1) Textures

(1.1.2) Mineralogy

(1.2) Granites

(1.2.1) Textures

(1.2.2) Mineralogy

(2) PETROGENESIS

Fourth rank headings may be made by starting a paragraph with underlined words and continuing text on the same line. Where only two tiers are used then either centralized or side headings in italics may be used (these notes, excluding the example given above in small print, show a two tier structure with side headings). The acknowledgements and references are given first rank headings. The numbering of headings as illustrated above is not essential but is encouraged because it helps the reader to see the organization of the paper and it helps the writer to cross reference sections in the text.

(2.2) References, Figures, and Tables

The following provides a summary of how these items should be noted both in the body of the text and in the final listing or captions. Note that the *Journal of Petrology* format does not change if an item is within rather than without parentheses.

IN TEXT
